NoctVision uses Thermal Imaging and Daylight Imaging in tandem to produce results that far exceed the capabilities of these individual technologies. NoctVision is a Day/Night Intelligent Surveillance system that can detect threats in zero light and light fog conditions. Vehicle detection can be done at a distance of 7 Kms during the day and 6 Kms during the night. The rugged design and possibilities of different types of sensors makes NoctVision an enduring and endearing product for strategic applications. Built-in Edge Analytics and Artificial Intelligence based architecture ensures that NoctVision can be deployed in strategic areas with minimal supervision; and still receive maximum actionable intelligence.
